

FOR IMMEDIATE RELEASE

New Cutter™ Lyme Disease Tick Test provides quick, inexpensive and 99.9% accurate DNA test result.
Determines if a tick is a carrier of Lyme disease before symptoms appear.

Brodheadsville, PA: You find a tick on yourself, your child, or your pet. You worry, does it carry Lyme disease? Now, finding an answer can be as close as your medicine cabinet, first aid kit or backpack. With the new Cutter™ Lyme Disease Tick Test you'll get a fast, 99.9% accurate DNA test result that tells you if a tick is a carrier of Lyme disease. It tests the tick, not the person or pet.

Lyme disease is a nation-wide problem

According to the CDC, Lyme disease is the fastest growing, most commonly reported vector borne illness in the United States. It's important to know the facts about Lyme disease and be ready to act swiftly.

Of critical importance to victims of tick bites is swift, correct diagnosis of the presence of Lyme disease, so if infected, doctors or vets can determine treatment. Unfortunately, excessive turnaround time and inaccurate results associated with typical lab tests are a major and all too common problem.

With the Cutter™ Lyme Disease Tick Test, results are fast and accurate. Notification within 3 days of sample receipt and 99.9% accurate DNA diagnosis assists doctors and vets by providing critical information.

Be prepared for when you find a tick on yourself, your child or your pet

A must-have for anyone active outdoors or involved in recreational activities such as hiking, camping, hunting and fishing. Kits are available in convenient cartons or durable travel kits. The all-inclusive manufacturer's suggested retail price is \$24.99 with no hidden costs or follow-up lab fees.

Created in the heart of "Deer Country"

Cutter™ Lyme Disease Tick Test is manufactured and distributed by EPA Enterprises, Inc. The company is located in the Pocono Mountains of Pennsylvania, an area and state notorious for its high incidence of reported cases of Lyme disease. The company's founders are well-acquainted with the ever-growing spread of Lyme disease.
